

Increasing employee interest in working abroad and higher benefits expectations provide employers with opportunities to differentiate their global mobility programs.

The pandemic accelerated the adoption of technology that makes working from anywhere more possible. As a result, organizations and employees are redefining their approach to international work assignments and reimagining globally-mobile work experiences.

With the globally-mobile work landscape continuing to transform, employee preferences and expectations are shifting as increasing numbers of workers, especially younger employees, express interest in working abroad and actively pursue globally-mobile roles. Yet, this increased engagement in globally-mobile roles comes at

a critical point in workforce development among employee populations shaken by the pandemic, where concerns around holistic health are heightened, causing these employees to turn to their employers for support.

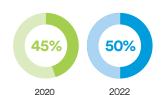

Forward-looking employers have an opportunity to respond to the evolving interest and expectations by expanding their spectrum of globally-mobile roles, adapting employee experiences and optimizing benefits strategies to fit the workforce of the future. When they do, employers are well-positioned to positively impact their recruiting and retention objectives and win the war for talent.

## Employee interest in working abroad is on the rise, especially among younger employees.

1 in 4 U.S. employees says their interest in working abroad has increased over the past three years.

Half of the workforce now expresses interest in globally-mobile work.

#### Interest in globally-mobile work by generation

Generation Z (25 years old and younger)	58%
